Facility Details for Wastewater

Describe the Current Facility before Improvement

The existing WWTF consists of three major components, the first is a headworks building with trash and grit removal, a laboratory, blowers, the treatment process controls, and chemical feed equipment. Next is the 96,000 gpd treatment process unit, which is an AeroMod, Inc. SEQUOX, modular treatment system with a dual process train and a decant storage tank with discharge pumping equipment. The treated wastewater is discharged to groundwater through 39,000 square feet of Rapid Infiltration Basins. The WWTF is permitted at 96,000 gpd and currently peaks at about 80% capacity during the summer tourist season. The existing collection system encompasses primarily the commercial properties along the S. Straights Highway. It is primarily gravity sewer with a few duplex pumping stations and associated force main piping. There are two main pumping stations that transport the wastewater from the service area to the WWTF. The WWTF is located on southeasterly of the service area, on the east side of I-75 approximately 1.5 miles from the service area.

Describe the Current Facility after Improvement

In regard to the WWTF, the Phase I project will add about 48,000 gpd to the existing plant capacity for a total of 144,000 gpd using the same AeroMod SEQUOX proprietary technology. There will be modifications to the headworks for additional grit and screening capacity associated with the higher influent flow rate, modifications to the chemical feed equipment, and integration of the additional treatment process equipment into the existing SCADA and controls, all of which is associated with the Phase I WWTF expansion. The additional discharge will require another 19,500 sft of rapid infiltration bed area, installed adjacent to the existing beds. In regard to the collection system, the Phase I service area encompasses the area westerly of the existing sewer district, between the Columbus Beach Club at the north end, Mack Avenue at the South, and Burt Lake to the east. The Phase I service area will include 226 new EDUs, primarily single-family home connections. In the area between the Sturgeon and Indian Rivers, inland from the Burt Lake Shoreline, the homes will connect to typical 8-inch gravity sewer. In the shoreline areas and Columbus Beach Club, where gravity sewer is cost prohibitive, low pressure sewer and individual grinder pumps will be provided. The gravity sewer construction will include approximately 7,350 feet of new 8-inch PVC gravity sewer, 22 manholes, 4 lift stations, and 6-inch PVC gravity service leads, serving 117 properties. There will also be an area of low pressure sewer with 10,300 feet of new HDPE force main, 11 cleanout/air relief structures, valves, and 68 individual grinder pump stations with 1.5" pressure service leads. There will also be 17 services provided to vacant lots, six of these are within the LPS sewer area and 11 are within the gravity service area.
